I have been working for Sunrun solar since Nov 2015. I get up everyday knowing that I am doing something that makes a difference. I am able to help homeowners by giving them a choice of how they power their homes. Solar is cleaner and cheaper and should be an option for every customer regardless of their electric company. Solar power is good for the environment. My customers can feel good about making a smarter choice. There also have been so many new jobs here in SC because of solar as well. This would not be possible without net metering.

I was really concerned about my job and my customers because of the policy uncertainty in 2018/2019 and now Dominion's proposal punishes customers and prevents solar growth in SC which will jeopardize many solar jobs.

I am hoping and praying that the commission will act to allow SC residents to continue to have a choice of how they power their homes and with clean energy (solar) and by doing so keeping the solar industry strong here in SC

Power Forward!

Carson
